Migration Guide

In this section:

- Overview
- How It Works
- <u>Migration Options</u>
- <u>Requirements</u>
- <u>Known Limitations</u>
- <u>Migration Monitoring</u>
- Migration Tab Overview
- Pre-Migration Checklist
- <u>Migration Steps</u>
- <u>Migration Processing Performance Tuning</u>

Overview

As of EchoSystem version 5.5, the ESS now provides Administrators the ability to selectively migrate data and content to the Active Learning Platform (ALP). The migration of data refers to the migration of existing EchoSystem data objects to ALP which include:

- Organizations
- Rooms
- Terms
- Users
- Courses
- Sections

The data migration is a prerequisite for content migration. The migration of content is carried out on a Section-basis and refers to the migration of existing *Presentations* within a *Section*. Once a *Section* has completed data migration, the content migration will be able to commence and this will require media reprocessing to ALP-format for migration.

If your current EchoSystem Presentation Status is	Then your ALP Presentation Status after Migration will be
Available	Available
Unavailable	Unavailable
Archived	Unavailable

For migration of User records, the migration processing will perform the following User Role migrations from the Ech oSystem to ALP.

EchoSystem User Role	ALP User Role
Academic Staff	Instructor
System Administrator / Administrator	Administrator

Scheduler	Administrator
License Manager	Administrator
AV Technician	Administrator

How It Works

The EchoSystem migration functionality works by leveraging the Active Learning Platform's REST APIs in order to migrate both data and content. The Active Learning Platform's REST API operates in a similar manner to the EchoSystem's REST API, where it is able to perform one REST call for one data object.

As a result of this method of operation, the EchoSystem requires implementing a queuing mechanism in order to iteratively process each data and content record for migration to the Active Learning Platform.

Each of the selected data objects supported for migration will undergo the following processing lifecycle as they are sequentially processed from the queue.

Migration Options

The EchoSystem migration functionality has been designed to provided flexibility and control for Administrators to coordinate the desired migration strategy by supporting both *"top-down"* and *"bottom-up"* migration options. Additionally, Administrators will be able to selectively queue individual data records for data migration to ALP, and selectively exclude data records as well.

Both *"top-down"* and *"bottom-up"* migration options will require media reprocessing of existing content into the ALP format. As a result, the option utilized will determine the availability of migrated content to ALP. It is recommended Administrators consult with relevant stakeholders to determine the appropriate migration strategy required in support of existing end-users.

Top-down option (Migrate Associated)

The *"top-down"* migration option allows Administrators to quickly and easily migrate all associated data from a selected *Organization*, *Course*, or *Term* level. This functionality has been designed to assist institutions with large-scale EchoSystem deployments. The following table describes the Migrate Associated functionality available:

Migrate Associated Functionality	Associated Data Objects updated for migration
Organizations	Rooms, Users, Terms, Courses, Sections
Courses	Sections, Terms (linked to the associated Sections), Us ers (enrolled within the associated Sections)

Terms	Sections, Users (enrolled within the associated
	Sections), Courses (linked to the associated Sections)

As an example, if a particular *Organization* is selected for top-down migration, the EchoSystem will queue all the associated *Rooms, Terms, Courses, Users, Courses,* and *Sections* for data migration to ALP. A background task will then process the data migration of the queued data records.

Once each *Section* has completed data migration, they will be added to a queue for content migration. A separate background task will process through each migrated *Section's Presentations* by reprocessing and migrating the content to ALP. Once all the *Presentations* are migrated for a *Section*, the background task will move on to the next *Section* to continue the content migration.

Bottom-up option (Selective)

In contrast, the **"bottom-up"** migration option allows Administrators to be highly selective in migrating data and content to ALP. This option requires Administrators to selectively choose the *Sections* to queue to migrate to ALP. The EchoSystem will check to ensure the *Section's* associated data will also be queued for migration to ALP, and includes the parent *Organization, Course, Term*, and its enrolled *Users*.

Once each *Section* has completed data migration, they will be added to a queue for content migration. A separate background task will process through each migrated *Section's* existing *Presentations* by reprocessing the content to ALP format before migration to ALP. Once all the *Presentations* are migrated for a *Section*, the background task will move on to the next *Section* to continue the content migration.

Requirements

- EchoSystem Server version 5.5
- Administrator access to Active Learning Platform
- ESS Media Processors configured to handle existing capture compression and ALP conversion
- Sufficient storage space for Intake Volume to support existing captures, and ALP conversion tasks

Pre-Migration Checklist

Please ensure that you have reviewed the <u>Pre-Migration Checklist</u> below which includes specific details regarding the requirements listed here as well as additional recommendations.

Known Limitations

- Data migration does not support creating ALP Departments.
- Data migration will not migrate any Capture Appliances to ALP. For instructions on migrating your devices, please see the <u>Device Migration guide</u>.
- Data migration does not support updating changes or modifications for migrated data.
- If any data is deleted from within ALP, the ESS does not allow for re-migration.
- Data migration currently will only support enrolling one Instructor to an ALP Section (the primary instructor, by default).
- HEMS data will not be migrated to ALP.
- Schedule data will not be migrated to ALP.
- Search Indexing data will not be migrated to ALP.
- Live-Only Presentations will not be migrated to ALP.

Migration Monitoring

Since background tasks are required to process the data and content migration status summaries and enhanced logging have been incorporated to EchoSystem 5.5 to assist Administrators monitor and investigate migration processing.

Status Summaries

EchoSystem 5.5 provides a Status Summary page summarizing the amount of data and content that exists, the amount has been migrated to ALP and the current Section content migration progress. Please see the Migration > Status page section for more details.

Migration Status

For each of the EchoSystem 5.5 data records supported for data migration to ALP, a Migration Status has been introduced to coordinate the migration processing.

The Migration Status values are summarized in the table below.

Migration Status	Status Description
Not Set	Data record has not been considered for migration yet
Will Not Migrate	Data record has been excluded from migration
Queued	Data record has been included for migration processing
In Progress	Data record is being processed for data migration
Migrated	Data record has been successfully migrated to ALP
Error	Data record has failed to migrate to ALP due to an error Will be excluded from further migration processing to allow Administrators to investigate the root cause of an error
	Data record can be queued again for migration

Content Migration Status

For *Sections*, an additional Content Migration Status is introduced to coordinate the content migration processing of existing *Presentations*. Please see Migration Tab Overview > Sections page for more details.

The Content Migration Status values are summarized in the table below.

Content Migration Status	Status Description
Not Set	Section has not been considered for data and content migration yet

Queued	Section has been data migrated and added to the queue for content migration processing
In Progress	Section is being processed for content migration
Completed	Section has successfully completed content migration of all existing Presentations, and the Term has finished Section can be queued again for further content migration to process any new Presentation additions
Pending Completed	Section has successfully completed content migration of all existing Presentations, and the Term has not finished Section can be queued again for further content migration to process any new Presentation additions
Incomplete	Section has attempted content migration, and one or more Presentations resulted in a migration error Administrators will need to investigate logs to determine the root cause of an error Section can be queued again for further content migration to process remaining Presentation with content migration error or any new Presentation additions

Logging

Data and content migration logs messages are written to a new log file and appear under the name 'ess-alp-migration.log'. These logs are accessible, if necessary, via the Monitor > Support tab and will be included in a support upload if it becomes necessary to send this information to <u>Technical Support</u>.

Additionally, the EchoSystem Media Processors log messages for media reprocessing for ALP format will be available under the associated Monitor > Processing Task record to assist Administrators to further investigate issues.

Migration Tab Overview

This section will summarize EchoSystem 5.5 functionality available in each of the Migration Tab pages.

Status

This tab shows current information regarding your migration.

Section Content Migration Processing

This section shows information regarding content that is currently being processed.

Section Name	Displays all of the Sections that have been selected for migration.
Section ID	Displays the corresponding Section ID.
Course Name	Displays the Course name associated with that particular Section.
Term Name	Displays the Term name associated with that particular Section.
Organization	Displays the Organization associated with that particular Section.
Migration Status	Displays the current status of the data migration. (Queued, In Progress, etc.)
Content Migration Status	Displays the current status of the content migration. (Queued, In Progress, etc.)

Status Summary

This section shows information regarding overall Migration status.

- Number of Organizations Migrated/Total Organizations:
- Number of Terms Migrated/Total Terms:
- Number of Campuses Migrated/Total Campuses:
- Number of Buildings Migrated/Total Buildings:
- Number of Rooms Migrated/Total Rooms:
- Number of Users Migrated/Total Users:
- Number of Courses Migrated/Total Courses:
- Number of Echoes Migrated/Total Echoes:
- Number of Sections Migrated/Total Sections:
- Number of Sections & Content Fully Migrated:
- Number of Sections Queued for Content Migration:
- Time taken for Content Migration:
- Time taken for Failed Content Migration:

Organizations

This tab displays the names of all of your current Organizations and allows you to select which ones to migrate.

 Name
 Displays the names of all of your Organizations.

Status	Displays current migration status:
	 Not Set: No action has been taken yet for this Organization. Will Not Migrate: This Organization has been flagged for exclusion. Queued: This Organization is currently queued to be migrated. In Progress: This Organization is currently being migrated. The migration status for this Organization cannot be modified any further. Migrated: This Organization has been migrated. The migration status for this Organization cannot be modified any further. Error: This Organization encountered an error during migration. Please review the ess-alp-migration.log for the specific migration error details to resolve and/or troubleshoot with <u>Technical Support</u>.
Actions	 Migrate: Flag selected Organizations for migration. Do Not Migrate: Flag selected Organizations that you don't want to migrate.
Migrate Associated?	If an Organization is flagged for Migration, this check box will appear. If you have chosen the <i>"top-down"</i> mi gration option, this check box will allow you to migrate all associated data objects to the selected Organization. Please Note Please use the Migrate Associated check box operation with discretion because it is a database intensive operation cascading Migration Status updates for all associated data objects. If there are any database contentions encountered the Migrate Associated check box operation will be rolled back. In this case, please wait and try the Migrate Associated check box operation again.

Rooms

This tab displays the names of all of your current Rooms and allows you to select which ones to migrate. This tab also allows you to search for specific Rooms.

The Room migration will check and migrate any associated Campuses, and Buildings as part of the migration processing.

Name	Displays the names of all of the Rooms.
Organization	Displays the Organization associated with the Room.
Campus	Displays the Campus associated with the Room.
Building	Displays the Building associated with the Room.

Status	 Displays current migration status: Not Set: No action has been taken yet for this Room. Will Not Migrate: This Room has been flagged for exclusion. Queued: This Room is currently queued to be migrated. In Progress: This Room is currently being migrated. The migration status for this Room cannot be modified any further. Migrated: This Room has been migrated. The migration status for this Room cannot be modified any further. Error: This Room encountered an error during migration. Please review the ess-alp-migration.log for the specific migration error details to resolve and/or troubleshoot with Technical Support.
Actions	 Migrate: Flag selected Rooms for migration. Do Not Migrate: Flag selected Rooms that you don't want to migrate.

Content Monitor

This tab displays individual Echoes that have failed to Migrate due to an error. This tab also allows you to search for specific Echoes.

Title	Displays the titles of the Echoes.
Presenter	Displays the primary instructor associated with the Section that contains the Echo.
Term	Displays the Term that the Echo is in.
Start Time	Displays the Start Time for the Echo.

Status

Displays the Status of the Echo (most likely 'Error').

Pre-Migration Checklist

Completed	Item	Description
	Prepare Academic Staff members	During migration, only the Primary Instructor assigned to a Section will be migrated to ALP along with the Section. We recommend that if you have multiple Academic Staff users assigned to your Sections, that you review this data to ensure that the correct Academic Staff member is assigned to the Primary Instructor.
	Prepare Users	During migration, users will be migrated to specific roles. Please ensure that the users you would like to migrate are assigned to a role in the ESS that will map to the desired ALP role. See the <u>Overview</u> above for role mappings.
		Users in ALP Please note that currently, in your ALP instance, once a User has been created they cannot be deleted, only made inactive.

Check for Echoes that may still be associated with users that have been deleted.	Any content in the ESS that may still be associated with a user who has been deleted will result in Migration errors. In order to avoid this, please run the following script against your database in order to check for this type of scenario:
	Query select distinct p.* from PERSON p inner join PRESENTATION_PRES ENTER pp on p.id=pp.person_id where p.deleted=1 and pp.id is not null;
	If the above script returns results, please contact <u>Technical Support</u> (a nd include your results) for assistance reassigning active users to the presentations.

Review available disk space for Intake Volume

The content migration processing will involve copying each Presentation's existing media files to the Intake Volume upload directory for reprocessing.

Increasing the available free disk space will allow more Presentations to be copied for media reprocessing by available EchoSystem Media Processors.

Disk space recommendatio n

A migration job will only be able to run if the size of the media files for that job plus the current total disk used on the Intake Volume adds up to be less than 70% of total disk space on the Intake Volume. So if the Intake Volume has 30% or less disk space available then no migration jobs will start. This is in place to prevent migration jobs filling the Intake Volume disk and preventing new ESS captures from uploading to the Intake Volume for processing.

Migration Steps

Step 1 – Log into your ALP Institution instance as an ALP Administrator

Your Institution will be provided an ALP Institution instance and the administrator login details will be provided to your primary technical contact.

echõ		
Welcome to your learning platform.	North America	~
Log in with Echo360 Email Address Pessoord COG IN Foget your pessoord? Foget your pessoord?

- 1. Select the EchoSystem Server data object type from the tab options presented.
- 2. Check the individual records to migrate to ALP.
- 3. Select the Action Menu Option "Migrate".
- 4. Repeat for each EchoSystem Server data object type to migrate to ALP.

Migration Processing Performance Tuning

The migration processing can be tuned by the EchoSystem Administrator to increase performance according to better leverage the infrastructure resources available.

The following migration processing settings are configurable whilst the EchoSystem is running:

Migration Property Setting	Default Setting
ess-alp-migration-thread-1-detect-entiti es-to-migrate-wait-between-executions-se conds	60 seconds
ess-alp-migration-thread-2-detect-sectio ns-to-migrate-content-wait-between-execu tions-seconds	600 seconds
ess-alp-migration-thread-3-detect-ess-co ntent-to-convert-wait-between-executions -seconds	600 seconds

Performance Tuning Instructions

To adjust the migration processing performance, the EchoSystem Administrator will need to perform the following actions:

1. Create an empty *dynamic.properties* text file and save it into the appropriate <Echo360 Directory>/server/etc/ directory

Typical Windows Installations	C:\Program Files\Echo360\Server\etc\dynamic.properties
Typical Linux Installations	/usr/local/echo360/server/etc/dynamic.properties

2. Copy the following lines in the window below and save them into the *dynamic.properties* file

```
# ----- parameters used to control ESS-ALP
migration thoroughput
ess-alp-migration-thread-1-detect-entities-t
o-migrate-wait-between-executions-seconds=60
ess-alp-migration-thread-2-detect-sections-t
o-migrate-content-wait-between-executions-se
conds=600
ess-alp-migration-thread-3-detect-ess-conten
t-to-convert-wait-between-executions-seconds
=600
ess-alp-migration-thread-4-detect-alp-conten
t-to-upload-wait-between-executions-seconds=
600
```

----- parameter used to control wait interval between issuing ALP API requests for ESS-ALP migration of data objects. # This value must always be less than ess-alp-migration-thread-1-detect-entities-t o-migrate-wait-between-executions-seconds, # since the batch limit is calculated as (ess-alp-migration-thread-1-detect-entitiesto-migrate-wait-between-executions-seconds)/ (entity-migration-processing-wait-interval-i n-seconds). # Having bath limit less than 1 will not perform any metadata migration. entity-migration-processing-wait-interval-in

-seconds=5

----- parameter used to control the ESS-ALP content migration max limit for copying Presentations to the Intake Volume executed by ess-alp-migration-thread-3-detect-ess-conten t-to-convert thread # This value must always be positive (greater than zero). # Adjust this parameter to increase / decrease the number of Presentations copied to the Intake Volume to adjust the content migration thoroughput. # The amount of Presentations copied to the Intake Volume will still be restricted by the available free disk space in the Intake Volume.

ess-alp-content-migration-presentation-intak e-max-copy-limit=5

----- parameter used to control free disk space reserve threshold percentage for

ESS-ALP migration of content content-conversion-free-disk-space-reserve-t hreshold-percentage-limit=30

3. Adjust the various migration processing settings in the *dynamic.properties* file and save the file

4. Wait for the EchoSystem to detect and load the changes in the *dynamic.properties* file

Device Migration

- Personal Capture for Mac
- <u>Classroom Capture</u>
 - Manual Method
 - <u>Command-Line Method</u>
- <u>SafeCapture HD</u>

Overview

This document covers possible scenarios for customers wishing to migrate their existing EchoSystem devices to the Active Learning Platform (ALP). These use cases cover the deployment procedures for classroom devices only – Personal Capture (Windows and Mac), Classroom Capture, and SafeCapture HD.

Personal Capture for Windows

Before migrating a Personal Capture for Windows install, ensure that the machine meets the minimum hardware specifications as outlined <u>here</u>. Additionally, take note of the <u>Supported Cameras and Input Devices</u> page to ensure they are using compatible USB devices for recording.

Manual Method

Please note

Personal Capture must be manually uninstalled and the new version installed when migrating to ALP.

- 1. Perform a manual uninstallation of the Personal Capture software via the Add/Remove Programs option within the Control Panel.
- 2. Log into the Active Learning Platform.
- 3. Click the Settings menu to open it and select Downloads, as shown in the below figure.
- 4. Click the **Windows Download** link from the Personal Capture section of the Downloads page, shown below. The installer must be run locally, so save the file to your computer.

5. While logged into the system as an administrator, run the downloaded .EXE file to install

To install Personal Capture on Windows

- 1. Locate the downloaded **Echo360PersonalCaptureInstaller.exe** file. It should be located in the Downloads folder.
- 2. On the warning message that appears, click **Open**.
- 3. Once the installer is launched, follow the prompts to complete the installation.

Command-Line Method

Output De la construction de la construcción de

Mass-migrating Personal Capture clients to ALP requires uninstallation of the existing software followed by installation of the ALP Personal Capture software.

- 1. Perform a command line uninstallation of any client installs. Content and logs will remain in the specified location.
- 2. Download the ALP Personal Capture Windows installer. In ALP, it's available from the **Settings** > **Download** menu.
- 3. Proceed with a command line installation of any clients, detailed instructions can be found here.

Personal Capture for Mac

Before migrating a Personal Capture for Windows install, ensure that the machine meets the minimum hardware specifications as outlined <u>here</u>. Additionally, take note of the <u>Supported Cameras and Input Devices</u> page to ensure they are using compatible USB devices for recording.

- 1. Click the Settings menu to open it and select Downloads, as shown in the below figure.
- 2. Click the **Mac Download** link from the Personal Capture section of the Downloads page, shown below. The installer must be run locally, so save the file to your computer.

3. Extract the downloaded .ZIP file, and run the installer. The installer will automatically remove the existing version of Personal Capture.

Existing recordings will remain intact in the same location after the upgrade. Note that Personal Capture for Mac has no command line installation options.

Classroom Capture

Before migrating a Personal Capture for Windows install, ensure that the machine meets the minimum hardware specifications as outlined <u>here</u>. Additionally, take note of the <u>Supported Cameras and Input Devices</u> page to ensure they are using compatible USB devices for recording.

Manual Method

Please note

Classroom Capture must be manually uninstalled and the new version installed when migrating to ALP.

- 1. Perform a manual uninstallation of the Classroom Capture software via the Add/Remove Programs Control Panel
- 2. Log into the Active Learning Platform as an Administrator.
- 3. Click the **Settings** menu to open it and select **Downloads**, as shown in the below figure.
- 4. Click the **Windows Download** link from the Software Capture section of the Downloads page, shown below. The installer must be run locally, so save the file to your computer.

5. While logged into the system as an administrator, run the downloaded .EXE file to install

To add a device to a room

- 1. From the main menu, click **ROOMS**.
- 2. Find the room you want to add the device to. Use the filtering lists at the top of the screen to narrow which rooms are shown.
- 3. Click ADD DEVICE TO ROOM.
- 4. From the Device list, select the device you want to add to the room. Devices are listed by MAC address of the device.
- 5. Click SAVE.

Command-Line Method

Please note

Mass-migrating Classroom Capture clients to ALP requires uninstallation of the existing software followed by installation of the ALP Classroom Capture software.

- 1. Perform a command line uninstallation of any client installs. Content and logs will remain in the specified location.
- 2. Download the ALP Classroom Capture Windows installer. In ALP, it's available from the Settings > Download menu.
- 3. Proceed with a command line installation of any clients, detailed instructions can be found here.

SafeCapture HD

The SCHD is a fully automated capture hardware that records class content and uploads the recordings for processing and publishing.

- 1. Insert a USB thumb drive into the computer you are using; this will be where you save the device configuration file (*device.xml*). Please note that the USB drive should be blank and FAT-32 formatted.
- 2. In the Active Learning Platform, click the Settings icon in the upper-right of the screen (it looks like a gear).
- 3. Select Configurations from the list.
- 4. Select the **Default Room Configurations** tab.
- 5. Make any necessary changes to the device/room configurations settings. These can be changed later for individual devices if necessary.
- 6. Scroll to the bottom of the page and click **Download**. Alternately, click **Save and Download** to retain any changes you made. Otherwise, the settings will revert to those that appeared when you opened the tab.
- Save or move the downloaded *device.xml* file to the ROOT location on the thumb drive (NOT in a sub-folder). Whether you save or move depends on your browser download settings. *DO NOT change the name of the file.*
- 8. Go to the SCHD device. If necessary, turn it on and make sure it has fully initialized (wait about five minutes).
- 9. Insert the thumb drive containing the *device.xml* file into the USB port of the SCHD. Allow the device to upload and process the configuration file before removing the thumb drive.
- 10. Repeat the last two steps for each device that can use the downloaded configuration settings.

To add a device to a room

- 1. From the main menu, click **ROOMS**.
- 2. Find the room you want to add the device to. Use the filtering lists at the top of the screen to narrow which rooms are shown.
- 3. Click ADD DEVICE TO ROOM.
- 4. From the Device list, select the device you want to add to the room. Devices are listed by MAC address of the device.

5. Click **SAVE**.
